Glendowie, Auckland, New Zealand.

Full NZ Work Rights.

ABOUT ME

Web Developer with a background in building responsive web applications and design systems. During my internship and volunteering at Scholar Spark, I focused on building reusable components with JavaScript as the base, applying modern concepts and industry best practices to ensure code quality and scalability. I have experience in implementing styling frameworks like Tailwind and Bootstrap to deliver high-performance, cross-browser compatible user experiences.

SKILLS

Technologies, Tools and Methodologies

Languages, Tools & Platforms	JavaScript (ES6+), HTML5, CSS3, TypeScript, React.js, Next.js, Tailwind CSS, Bootstrap, Tamagui, Git, WordPress, and CMS management.
Diagnostics & Testing	Handling the debugging and correction of errors in application code—including legacy SAP and Visual Basic environments—following established quality standards.
Documentation	Use of Storybook to maintain UI component specifications and Visio for operational procedures, ensuring all technical documentation is clear and up to date for end-users.
Automation & Deployment	Use of GitHub to build and manage CI/CD pipelines, automating the testing and deployment phases to ensure code quality. I also implement feature flagging and automated versioning to maintain a stable release cycle.
System Analysis	Evaluating program requirements and identify where existing systems or processes fall short, recommending technical improvements to resolve these deficiencies.
Data & Cloud Operations	Managing data integrity across SQL Server and MySQL, and I have handled the setup and automation of cloud environments in Azure and AWS.

EDUCATION

Auckland Institute of Studies (AIS) — Auckland, New Zealand.
Post-graduation Diploma in Software Development.

Full Time—September 2024 / August 2025

The programme included five market-focused programmes: Web and Mobile Development, Cloud Applications, Continuous Integration & Continuous Deployment, Software User Experience.

Covered Languages & Technologies: Kotlin, C#, SQLite, Firebase, Figma, Cloud Computing, Visio, Python, Web Languages, Visual Studio Code, SQL Server Management, Cloud Computing – Azure and AWS

Paulista University (UNIP) — Sao Paulo, Brazil.

Bachelor's diploma in systems Analysis and Development.

Full Time—February 2015 / December 2017

The course focused on computer science, and its branches included four main topics: Hardware, Network, Internet and Software.

Covered Languages & Technologies: C, C++, Java, JavaScript, MySQL 8, MySQL Workbench.

WORK EXPERIENCE

Scholar Spark — Auckland Based. Front End Developer.

**Internship—February 2024 / August – 2025
Volunteer – August 2025 / Current**

Contributed to an LLM-powered web application streamlining academic research.

- Building a scalable and user-friendly front-end interface utilising a modern tech stack.
- Building reusable components, +20, as part of the development of a comprehensive Design System from the ground up.
- Engineering a library of reusable, controlled components using Next.js, Storybook, and the Tamagui UI toolkit, adhering to modern best practices like token-based styling for maximum scalability.
- Creating a responsive, user-friendly interface based on product requirements, directly impacting the usability and accessibility of the core application for academics and researchers.
- Weekly meeting for project alignment and progression.

Tivit Multinational — Sao Paulo, Brazil. Support Analyst.

Full Time—2018 / 2019

Delivered enterprise-level IT support for Itaú, South America's largest bank. Tivit inherited the support contract from HPE, keeping the same duties, and added a few more functions, such as:

- Managing user accounts, network file permissions, and security groups using Windows ActiveDirectory, and configured endpoints with McAfee antivirus to maintain a secure corporate environment.
- Exceeding service delivery goals by consistently meeting strict Service Level Agreement (SLA) targets (98%) for resolving technical support.
- Support for 500+ end-users, resolving 20 to 30+ tickets daily.
- Configuring and maintaining critical business systems, including a proprietary version of Itaú SAP and Windows Remote Desktop, minimising downtime for end-users.

DXC (former Hewlett-Packard Enterprise) — Sao Paulo, Brazil. Technical Support.

Full Time—2016 / 2018

Served as a key technical resource, bridging end-user support and software development at Bank Itaú.

- Acting as a liaison to development teams by identifying, reporting, and remotely resolving bugs in SAP and Visual Basic source code.
- Delivering comprehensive remote support for all Windows OS versions, Outlook, and internal applications, resolving issues through remote access, CMD, and Intranet package deployment.
- Diagnosing and resolved complex hardware and software conflicts, ensuring high levels of system performance and user productivity.
- Solve hardware and software issues regarding to malfunctioning, preventive loss and basic user doubts.
- User assistance to file recovery/backup.
- Remote access through Windows Desktop Connection / VMWare.
- Following of tickets through an internal ticketing system.
